

How PhosAvast™ Supports Your Pet's Kidneys

Single-ingredient phosphate binders can only capture phosphorus one way, leaving the rest to reach the bloodstream. PhosAvast combines three, each working through a different mechanism, so more phosphorus is captured helping to reduce the amount of phosphorus processed by the kidneys.

Calcium Carbonate: a mineral-based binder, widely used in veterinary practice, that captures phosphorus directly in the intestines

Chitosan: a naturally derived polysaccharide that provides a complementary, non-mineral binding pathway

Magnesium Carbonate: a calcium-free mineral binder that broadens capture without adding dietary calcium

Research-Backed

Developed from peer-reviewed research with ongoing clinical evaluation. Every formulation decision is rooted in published science.

Made in the USA from globally sourced ingredients

Manufactured in the USA with globally sourced ingredients. Built for longer lives

Bio Health Solutions develops evidence-based supplements designed to improve and support long healthy lives of companion animals.

PHOSAVAST™ Dietary Phosphate Binder for Cats and Dogs

Maintaining normal levels of phosphorus is important to kidney health in cats and dogs. PhosAvast™ is a veterinarian-developed phosphate binder that helps reduce the absorption of dietary phosphorus in the gut before it reaches the bloodstream, so less is processed by the kidneys.

DIETARY PHOSPHATE BINDER FOR CATS AND DOGS

VETERINARIAN RECOMMENDED

MADE IN THE USA
from GLOBALLY SOURCED
INGREDIENTS

Proprietary Formula | Supports Kidney Health | Easy to Administer | Works With All Diets

FREQUENTLY ASKED QUESTIONS:

WHEN SHOULD MY DOG OR CAT START TAKING PHOSAVAST?

Veterinarians may recommend PhosAvast for any pet with elevated phosphorus levels but still in the normal range. It can also be considered for senior pets over 7 years of age as part of a proactive approach to renal health, especially when paired with AminAvast. Talk to your veterinarian about when to begin.

MY PET IS ALREADY ON MEDICATIONS AND SUPPLEMENTS. CAN I STILL GIVE PHOSAVAST?

Discuss any changes to your pet's supplement regimen with your veterinarian.

HOW DO I ADMINISTER PHOSAVAST?

PhosAvast comes in an easy-to-use sprinkle capsule. Simply open the capsule at mealtime. In a palatability study, 92% of cats readily accepted PhosAvast.

CAN PHOSAVAST BE USED WITH ANY DIET?

Yes. PhosAvast works with all diets, including commercial, vet recommended renal, and home-prepared diets.

CAN I GIVE PHOSAVAST AND AMINAVAST TOGETHER?

Absolutely. PhosAvast captures phosphorus before it can reach the kidneys. AminAvast supports the kidney cells themselves. Many veterinarians recommend using both as part of a comprehensive kidney care plan.

WHAT MAKES PHOSAVAST DIFFERENT FROM OTHER PHOSPHATE BINDERS?

PhosAvast uses a proprietary blend of three phosphate-binding ingredients (Calcium Carbonate, Chitosan, and Magnesium Carbonate), each working through a different mechanism. PhosAvast's combination captures phosphorus in the gut before it can reach the kidneys.
